911 NETWORK

DISPATCH

DESK EDITION · ISSUE 01 · NOVEMBER 2026 · FIRE & EMS + PATROL

Your first call for responder gear.

The print edition of Dispatch, from the gear desk at 911 Network.

Inside: Ask the Network · the Kit Ladder · bags · station wear · lighting · boots
For patrol: HOLLE · fitting the female officer · cold weather · restraints · weapon-mounted lights

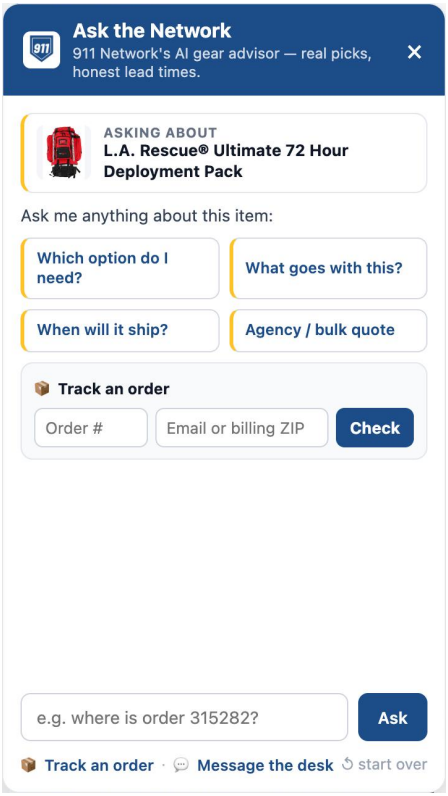

911network.com · 262-283-5200 · Nashotah, Wisconsin

Ask the Network. It is on every product page.

911 Network's AI gear advisor answers product, fitment and order-status questions from the live catalog. When it cannot answer, a person at the Gear Desk does.

Ask the Network is the chat panel on 911network.com. It is AI, and it works from the same catalog data the site runs on: current listings, stock states, manufacturer specs as printed on the listing, and your order history if you are signed in. It only recommends what is actually on the shelf, so you are not spec'ing around a backorder.

Tell it the job, not the SKU. “Stocked trauma bag for a patrol car.” “Which Ringers size for a 10-inch hand.” “Rechargeable right-angle light for a fire helmet.” It comes back with the listed options, the fitment notes, and the page to buy from.

Five questions it answers well

1. **Stock a bag.** “Stocked kit, bag only, or refill for a two-person BLS crew” — it specs the fill level and links the kit and its matching refill.
2. **Find a light.** “Describe your setup” — handheld, helmet or scene, rechargeable or primary cells, and it names the listed models.
3. **Glove and boot sizing.** “I'm between a Large and an X-Large” — it reads the maker's chart on the listing and tells you which band you are in.
4. **Order status.** “Where is order 315282?” — it looks the order up and shows the tracking it has.
5. **Part numbers.** “Look up SKU 6075CUBL-2-2” — it returns the listing and the current replacement if that number is discontinued.

What happens when it cannot answer

It says so and hands you to the Gear Desk. The handoff form in the chat lands at support@911network.com with your question attached; a person answers at 262-283-5200, Monday through Friday, 9 AM to 6 PM Central. Anything that needs a quote, a purchase order, or a judgment call about your department's spec goes to a person, not the model.

What it will not do

It describes equipment and quotes manufacturer specs. It does not tell you what meets your department's policy, your state's rules, or your medical direction's protocol. You verify; we describe. It can make mistakes: confirm stock, fitment and pricing on the product page or with the desk before you rely on an answer.

scan · live page

One bag, one fill level, one refill. That is the whole kit.

A first responder kit here is three things sold as one: an L.A. Rescue bag sewn in the USA, a packed fill level, and a refill path.

Every kit lists its contents item by item with counts on the product page, names the component brands we stock, and links the refill that matches it, so the second order is a restock, not a rebuild. Fill modules are packed and labeled by their maker and sealed; the bag carries, the module is the sealed unit inside it, and a crew can check the bag in under a minute and restock only what was used. A printed contents card rides in every bag with space for lot and expiration notes.

First Call-In Bag · 911FCB-K1 · Basic Fill, 62 pieces

Contents are a starting configuration. What rides in the bag is your medical direction's call under local protocol; module swaps for agency orders go through the quote desk.

Fill levels run in a ladder. **Basic** covers wound care, bandaging and diagnostics for a first-in bag. **Standard** adds airway adjuncts, splinting and bleeding control, with a genuine NAR C-A-T tourniquet. **Advanced** adds adult BVM, non-rebreather and cannula, a vented chest seal, cervical collar, roll splint and hemostatic gauze. **Oxygen** builds on that with a 0–25 lpm regulator, adult and pediatric interfaces, and an aluminum D cylinder that **ships unfilled**; have it filled and inspected by your local gas supplier before the kit goes in service.

Trauma Attack Pack · O2 To Go Pro Plus · Oxygen Duffel

The ladder (no prices in print; every row has a live page)

Rung	Kit	SKU	Pcs
Patrol	First Call-In Bag Jr w/ Patrol Fill Kit	911LA864-KV	36
Basic	First Call-In Bag w/ Basic Fill Kit	911FCB-K1	62
Standard	First Responder Attack Pack w/ Standard Fill Kit	911LA878-K2	145
Standard	Trauma Attack Pack w/ Standard Fill Kit	911LA4070-K2	145
Advanced	Trauma Attack Pack w/ Advanced Fill Kit	911LA4070-K3	165
Oxygen & Airway	Oxygen Duffel w/ Oxygen & Airway Fill Kit · cylinder ships unfilled	911LA8490-KO	25
Oxygen & Airway	O2 To Go Pro w/ Oxygen & Airway Fill Kit · cylinder ships unfilled	911LA3250-KO	25
Oxygen Trauma	O2 To Go Pro Plus w/ Oxygen Trauma Fill Kit · cylinder ships unfilled	911LA3255-K4	173
Oxygen Trauma	O2 To Go Backpack w/ Oxygen Trauma Fill Kit (cylinder not included)	911LA3245-K4N	170
Pediatric	Pediatric ALS Attack Pack w/ Pediatric Fill Kit	911LA8404CC-KP	60

Who each rung is listed for

Patrol: trunk or personal-vehicle bag, bleeding control and airway staged first. **Basic:** volunteer fire/EMS home-response, duty officers and chase cars. **Standard:** BLS crews standardizing one jump bag across the fleet. **Advanced:** fire and EMS first-in crews running BVM, collar and chest seal from one bag. **Oxygen & Airway:** standby station kit or first-in jump kit with the cylinder in the padded center cell. **Oxygen Trauma:** oxygen, airway, bleeding control and assessment in one bag, stocked to the same list on every rig. **Pediatric:** pediatric-sized airway, oxygen interfaces, bandaging and immobilization beside the adult basics.

Refills

Every stocked kit has a refill with the same modules and the same counts, minus the bag. Order the refill that matches the fill level printed on your kit's contents card. Agencies can put refills on a standing purchase order through the quote desk.

scan · live page

The assignment picks the bag. The calendar picks the restock.

By The Gear Desk

Walk into most gear stores and the first question is “how big?” That is backwards. The bag is not the decision; the assignment is. Before you look at a single product, answer three questions about how the bag actually gets used.

Where does it live? A trunk, a locker, a rig, your back for a two-mile hump. Weight and carry system matter very differently for each.

How fast do you need in? A medical bag cannot just zip. You need color-coded, tear-away access under stress.

What is the load? Soft goods and paperwork ride differently than steel, optics and fluids. Structure and internal protection follow the load.

Those three answers, carry, access and load, drive every real decision. Capacity is the last thing to settle, not the first.

For medical and EMS the bag is judged on one thing: can a gloved hand, under pressure, find the right item on the first reach. That means color-coded or clearly labeled compartments, ideally tear-away modules; a layout that stays put when the bag is dumped open; and fabric and zippers you can clean and decontaminate. A smaller bag you can work fast beats a larger one you have to search.

Pick by what the bag carries and how long it is away from the station. Station life is a garment or bedding bag. Turnout and equipment are the duffels and gear bags. Deployment is the 72-hour and strike-team packs. Medical carriage is the attack packs and oxygen bags.

Four shells, by the listing

First Call-In Bag · 911FCB
17 × 12 × 10 in, 1.2 lb, lifetime warranty on the bag.

O2 To Go Pro · LA3250
27 × 12 × 10 in. Padded center cell for a standard or jumbo D cylinder; cylinder, if added, ships unfilled.

Firefighter Day Bag · LA854
19 × 12 × 9 in. Horseshoe flap, wet-clothes compartment, hidden strap.

Long Crew Bag · LA875
24 × 14 × 12 in. Closed-cell foam floor and ends, side pull handle.

Lifecycle and reorder

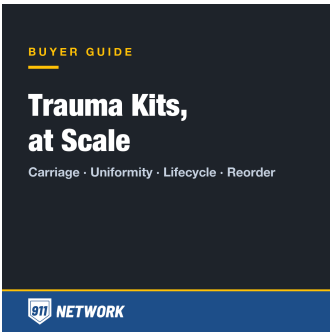

Contents are medical direction's call. The program around the contents is the quartermaster's, and it has four parts: carriage, uniformity, lifecycle, reorder.

Uniformity is cheap: one pouch spec per carriage tier, one placement convention per assignment, written into the same document that records the carriage standard. Gear you cannot find is gear you do not have, and crews change rigs, shifts and partners.

Lifecycle: trauma consumables are dated inventory, and the program treats them like any other dated inventory. A par sheet records each kit's dated items, replacement runs on the manufacturer's dating, and the trigger fires ahead of expiry instead of after it. The second rule costs nothing and gets skipped constantly: training gear stays segregated from issue gear, marked, and never migrates back into an issue kit.

Reorder is where kit programs quietly die. The kit gets issued once, the line item disappears from the budget, and three years later nobody can say which kits are still complete. Set a par level per kit model, tie the trigger to usage and dating, and reorder in units that restore a kit to its listed configuration in one line item. That is what refill kits are for.

The same logic runs the rest of the station's gear. Keep a lifecycle ledger: what ages out this year on manufacturer guidance and observed wear, belts gone soft, boots at the resole-or-replace point, handhelds that no longer make it through a shift on a charge. Nothing on this ledger is exciting. It is the budget's spine. Fund replacement as a standing quarterly line instead of an annual event, and it stops competing with every new program each fall.

Kitting a unit right now?

Send the Gear Desk your protocol's contents list and your roster. We will match the kit tier, spec the carriage, and set up the refill plan around it.

Full articles: *How to spec a gear bag by assignment* and *Building patrol trauma kits at department scale*, in the Resource Center.

scan · live page

Station wear that gets washed on Monday and worn on Tuesday.

Duty clothing is equipment you wear for twelve hours straight. The 5.11 Company line is the duty-line product departments buy, not a consumer lookalike: twill construction picked for wear, cut for movement, in Fire Navy. Pair the Company Pant 2.0 or Company Cargo Pant 2.0 with the Company Shirt S/S for a station uniform, or run the Job Shirt 1/4 Zip 2.0 over it in the bay.

For EMS crews, the Stryke EMS Pant in Flex-Tac is cut for the rig, in men's and women's sizing, with the Taclite EMS Pant as the lighter-weight option.

Sizing: order your normal size in the listed range, and ask the Network if you are between sizes; we check the maker's chart. Size runs for a whole roster go through the quote desk as one line per size.

On the page

5.11 Company Pant 2.0 · Fire Navy, waist 28–48 5-74508
5.11 Company Cargo Pant 2.0 5-74509

Ringers extrication gloves, and the chart that ends the sizing email.

Ringers sizes gloves by number, and the number is the last two digits of the part number: 347-10 is a Large. Measure the dominant hand around the knuckles, thumb excluded, with a flexible tape, then match the band. For a roster order, collect the measurement, not the letter size people think they wear.

Three extrication models and two rescue models are stocked. The 313 Extrication is the leather Armortex glove in black. The 314 Extrication is the hi-viz model with TPR impact protection. The Extrication Barrier One is the hi-viz yellow glove the maker lists as waterproof and breathable. The Rescue Glove comes in black or hi-viz yellow; the Rope Rescue Glove is leather, sized Small through 2X-Large.

313 Extrication · RG-313

314 Extrication · RG-314

Barrier One · RG-327

Rescue Glove · RG-347

Ringers size	Letter size	Hand circumference
07	X-Small	6.5–7 in (16.5–18 cm)
08	Small	7.5–8 in (19–20.5 cm)
09	Medium	8.5–9 in (21.5–23 cm)
10	Large	9.5–10.5 in (24–26.5 cm)
11	X-Large	10.5–11.5 in (26.5–29 cm)
12	2X-Large	11.5–12.5 in (29–32 cm)
13	3X-Large	over 12.5 in (32 cm)

Chart per Ringers Gloves (X-Small through 2X-Large); 3X-Large is the band above 2X-Large.

Decide the power source first. Then the size class. Then read candela before lumens.

Handheld duty lights for fire and EMS come down to two decisions before any model name. Rechargeable lights need a charger per member or per vehicle and cost less over a career. CR123 and AA lights need no charger and consume cells. Right-angle and intrinsically safe lights for fire and hazmat sit in the same section as the patrol handhelds; helmet and cap lights are their own section; scene lighting is its own.

Then the spec panel. Every duty light is sold on one number, lumens, and that number cannot tell you whether the light will do your job. Lumens say how bright the room gets. Candela says how far the beam reaches. Read candela first, because reach is what varies most between lights, then lumens for how much spread comes with it. Both sit on the ANSI/PLATO FL1 panel reputable manufacturers publish for every light. One spec per class pays twice, in reordering and in training. Your policy and your spec make the pick; we describe, you verify.

Boots are a size run, not a style decision.

Boots sit on the lifecycle ledger at the resole-or-replace point, and they are fitted gear: a roster order needs a current size run, with widths, before anything is bought at quantity. The two lines below are listed in regular and wide fittings and in the size ranges shown on each page; order your normal size in the listed range and ask the Network if you are between sizes.

The 5.11 Company 3.0 Boot is the black station and duty boot in sizes 8 through 13, regular and wide. The Company 3.0 Carbon Tac Toe adds a composite toe, with the protective rating stated by the manufacturer on the listing. Magnum's Stealth Force 8.0 and 6.0 are the 8-inch and 6-inch lace-up waterproof duty boots, listed waterproof and breathable by the maker, in sizes 8 through 15; the Strike Force 8.0 side-zip waterproof runs 7 through 15.

Buying with grant money. What changes on our side, and what does not.

If your department is buying with an FY2025 Assistance to Firefighters Grant, or any other award, tell us the program on the quote form: AFG, BVP, JAG or another. We itemize the quote by line with part numbers and unit pricing so it matches your award paperwork, and we flag the lines that matter to it. Eligibility is set by the grant program, not by us; we make the quote easy to attach.

On our side of fire and EMS: medical and trauma kits, EMS bags and refills, rescue and duty lighting, footwear and outerwear. We do not carry turnout gear or SCBA, so we will not waste your time on those.

What the quote looks like: a formal quote on letterhead, itemized by line with part numbers and unit pricing, so it drops straight into a requisition or grant paperwork. Stock and lead times are confirmed before we quote, and discontinued part numbers come back with the manufacturer's current replacement, not a surprise backorder. Quotes go out the same business day; requests that arrive after hours go out first thing the next business morning.

If the equipment has all been bought already, ask for the Agency Welcome Kit and W-9 anyway, so we are on file for the next round and the in-between purchases.

SEND THE LIST. WE'LL RUN IT DOWN.

911network.com/request-a-quote · support@911network.com

262-283-5200 · a person answers Mon–Fri 9–6 Central

Quote back the same business day, with stock and lead times confirmed.

scan · live page

Three ways to buy. One desk.

1

Purchase order, Net 30

Email your PO on agency letterhead to support@911network.com. We verify and acknowledge the same business day, confirm stock and ship timing before anything is committed, ship, and invoice on Net 30 terms. Net 30 is extended to approved agency and contract accounts; approval for government agencies is typically same-day.

2

Agency card on the website

GSA SmartPay and agency purchase cards work at 911network.com like any card, the fastest path for micro-purchases and small orders. Visa, Mastercard, American Express and Discover. Quoted orders can be paid from the pay link that ships with the quote.

3

Quote first

Send your list to the Quote Desk: part numbers if you have them, a plain description if you do not, or the reorder export your inventory system spits out. Pricing returns the same business day with stock and lead times confirmed.

Tax-exempt purchasing. Send your exemption certificate once, with your first quote, PO or by email, and we keep it on file. PO and quoted orders are entered tax-exempt from then on.

Vendor registration. Ask for the Agency Welcome Kit: our W-9, vendor information and payment terms in one packet. Legal name: Logic360 LLC d/b/a 911network.com, Nashotah, Wisconsin. In business since 2016 as a U.S.-based authorized dealer of factory-authorized product.

No minimum order. A 9-member department gets the same desk as a 900-member one. New accounts and bulk requests are verified against agency details before quoting or shipping; it protects your department and ours.

Shipping. Ships via USPS, UPS or FedEx; in-stock items ship in 2–8 business days, and anything longer is told to you up front. Terms on the Shipping & Returns page.

For patrol: what's new this season. Safariland's HOLLE duty belt leads.

The first half of this issue was built for the station and the rig. The next nine pages are for the duty belt: the belt system Safariland is rolling out, fitting the officers the standard belt never fit, cold-weather issue, restraints, lights, and what is newly available through our distributor.

Safariland introduced HOLLE at SHOT Show 2026 and started shipping it this spring. Per the manufacturer, it is a duty belt that keeps the traditional profile while changing how gear attaches to it: accessories hard-mount to the belt in 3/4-inch increments, without keepers or threading pouches on, and reposition without unloading everything ahead of them. Per Safariland, ELS, QLS and TQP accessories are compatible, and traditional belt-loop pouches still slide on. Buckle choices are Sam Browne, CopLok, Cobra and buckleless.

Those are the manufacturer's descriptions of its own system. They are specific and testable, which is what makes them useful, but they are claims, not our field notes; we have not run it on a belt line yet. If belt churn is a real cost center for your unit, HOLLE is worth three questions and a small trial. If your belts and keepers are mid-lifecycle and nobody is complaining, launch news is not a reason to change.

HOLLE is now on our site in all four buckle styles, in Plain, Basketweave, Hi-Gloss and Nylon Look finishes and sizes 20 to 62 inches, with the HOLLE-mount holster belt loops. It ships on backorder from our distributor. The full evaluation guide, with the trial checklist, is in the Resource Center.

The standard duty belt was cut for one body. Here is how to kit the rest of the roster.

By The Gear Desk

Women make up less than 14% of sworn officers and 20% of recruits in state and local agencies, per the 30x30 Initiative, a coalition of police leaders, researchers and professional organizations working to raise that share; it calls 30% the threshold where change begins to happen. Recruit classes are already there in many departments. The supply room usually is not.

Nothing about kitting a female officer is exotic. It is the same four ledgers from the new-fiscal-year guide, condition, lifecycle, sizing, gaps, kept honestly. The gap most departments have is that the sizing ledger was built from one size chart, the men's, and everything else was handled one officer at a time. Build the ledger from everyone on the roster and the exceptions turn back into line items.

The belt. A straight 2.25-inch duty belt sits on a straight torso. On a shorter torso or a more pronounced hip, the same belt either rides up into the ribs under the vest or tips the holster outward. Two listed answers: a **contoured belt**, cut on a curve so it follows the hip (Safariland 872 Contoured, suede-lined SafariLaminate, sizes 26–54; the 942 Contoured Buckleless; Aker's Sally Browne Curved Duty Belt in leather), and a **lower ride for the holster**. Safariland's drop-loop and low-ride belt loops move the holster body below the belt line so the grip clears the vest and the hip. The 6075UBL-2 drop loop is not on the site today; ask the desk and we quote it against your holster model.

Size the belt by waist measured over the uniform and the under-belt it rides on; duty belts size larger than pant size.

The pouches. Less belt run means fewer places to put things. The Safariland Model 72 Magazine & Cuff Pouch carries a magazine and a set of cuffs in one SafariLaminate body for 2.25-inch belts, offered in Basket Weave, Hi Gloss, Nylon Look and Plain. It is listed by fit code (76, 83, 383), and the fit code has to match the magazine. Send the pistol model with the order and the desk confirms the code.

On the belt, as listed

Safariland 872 Contoured Duty Belt · SAFA-872
Suede-lined SafariLaminate, 2.25 in; Basket Weave, Hi Gloss, Plain; sizes 26–54.

Aker Sally Browne Curved Duty Belt · AKER-B01W
Leather, Basket Weave. Listed in one size today.

Safariland Model 72 Magazine & Cuff Pouch · SAFA-72
Fit codes 76 / 83 / 383; four finishes; brass or chrome.

Uniforms cut for women, listed by the maker's chart

Not men's sizes relabeled; separate patterns with their own size scales, which is the whole point for the sizing ledger (numeric 0–20 or 6–18, not waist inches). Listed today:

• **5.11** Women's Stryke Pant (sizes 0–20, Regular and Long; Black, Dark Navy, Khaki, Storm, TDU Green); Women's EMS Pants; Women's Taclite Pant; Women's Stryke PDU Class B; Women's Taclite PDU Class A and B; Women's Apex Pant.

• **Flying Cross** FX STAT Women's Class A pants (4- and 6-pocket) and Class B pants, waist 6–18, Black and LAPD Navy; Justice and Command women's pants and long-sleeve shirts.

• **Elbeco** Women's UFX Tactical Polo, short and long sleeve, Small through 2X-Large, Black, Gray, Navy, listed moisture-wicking by the maker; Women's TexTrop2 shirt.

• **Boots:** 5.11 Women's ATAC 2.0 in 8-inch side-zip, 6-inch side-zip and 8-inch Storm, sizes 5–10; Rocky Women's Code Blue 8-inch Public Service Boot and Code Blue Sport; LION HellFire 14-inch women's boot on the fire side.

5.11 Women's Stryke Pant

Flying Cross FX STAT Women's Class B

Elbeco Women's UFX Polo

5.11 Women's ATAC 2.0 8" SZ

Body armor

Armor is measured, not sized off a chart, and the measurement is the maker's: chest, waist, front and back length, taken in uniform, per the manufacturer's measuring instructions for that model. We do not list body armor by cut on the site; it is quoted through the desk with the maker's measuring form, and we make no statement about protection beyond what the manufacturer publishes for the model. If your department issues armor, put the measuring session on the same calendar as the size run.

Order it as a program, not an exception

1. Rebuild the size run with every size scale the roster actually uses. 2. One spec per class still holds: pick the women's-cut pant and shirt that match the men's spec in fabric and color. 3. Send the run to the quote desk as one line per size; fit codes, belt sizes and boot widths are checked against the maker's charts before the quote goes out.

scan · live page

Cold-weather issue is a size run with a deadline.

Outerwear is the one class where a lifecycle ledger pays off in the same season it is written: the jackets that aged out last winter are the ones nobody has the right size of in November. One spec per class, sized off the roster, ordered before the first hard frost.

System jackets. The 5.11 2.0 jackets are built as layers that zip together or apart: the 3-In-1 Parka 2.0 (Black, Dark Navy, X-Small through 4X-Large), the 4-In-1 Patrol Jacket 2.0 (Black, Dark Navy, Sheriff Green) and the 5-In-1 Jacket 2.0. Each is listed waterproof and breathable by the maker, with a fleece layer. One spec of system jacket covers the roster from October to April.

Parkas. The Responder Parka 2.0 (Black, Dark Navy) and the Bristol Parka (Black) are the long-cut shells. The 3-In-1 Rev High-Vis Parka is the reversible high-visibility yellow version; the listing states the color, not a visibility class, so check the maker's sheet against your policy.

Softshell and mid-layer. The Chameleon Softshell 2.0 and First Tactical's Softshell Short Jacket are the between-seasons layer. Flying Cross's DutyGuard HT Pullover (Black, LAPD Navy, Regular and Long) is the uniform-matched version with a fleece interior.

Duty uniforms stocked, one strip: Elbeco UFX polos in short and long sleeve, men's and women's; Flying Cross Command, Justice and FX STAT shirts and trousers; 5.11 Stryke and Taclite PDU Class A and B. Size runs go through the quote desk as one line per size.

5.11 3-In-1 Parka 2.0

5.11 4-In-1 Patrol Jacket 2.0

5.11 Chameleon Softshell 2.0

Flying Cross DutyGuard HT

Fire and EMS, and what both services share

Station wear. The 5.11 Job Shirt 1/4 Zip 2.0 (Black, Fire Navy, Heather Gray; Regular and Tall) is the fleece station layer; the W/P Job Shirt 2.0 (Fire Navy) adds a waterproof, breathable shell per the maker. The Station Jacket (Black, Fire Navy, with Tall sizes) is listed waterproof. First Tactical's CTN Job Shirt 1/4 Zip is the cotton alternative. The 5.11 Company pant and shirt line is on page 8.

EMS outerwear. The Responder Hi-Vis 2.0 is the EMS-colored shell (Dark Navy, Range Red, Royal Blue), listed waterproof and breathable with a fleece layer. The Responder Parka 2.0 is the long version.

Hands. Damascus SubZero Ultimate Cold Weather Gloves (Small through 2X-Large), Tempest Advanced All-Weather with Gripskin, Winter Cut Resistant Patrol Gloves with Kevlar palm; Thinsulate Leather Dress Gloves for the Class A line. Extrication gloves are on page 9.

Head. Voodoo Tactical Embroidered Thinsulate Beanie, Zan Headgear fleece-lined Helmet Liner/Beanie and SportFlex skull cap, XGO Phase 4 Balaclava, Blackhawk Bibbed Balaclava with Nomex (listed by material; no rating stated).

Base layer. 5.11 Performance Utili-T short-sleeve 2-pack (Dark Navy), listed moisture-wicking.

The order. Sizes first, by maker's chart, Regular and Tall and Long where the listing offers them. Then quantity by the lifecycle ledger. Then one line per size to the quote desk. Lead times are confirmed before the quote goes out, so the first frost is not the first time you learn a size is on backorder.

Restraints and OC: what is on the shelf, by the listing.

Restraints and OC are duty equipment. When and whether to use them, and what may be carried where, belong to your agency's policy, your training and your jurisdiction. This page describes the equipment as the makers list it, nothing more.

Handcuffs. Pick by cuff style first, chain for patrol, hinged for transport and corrections, then by lock mechanism, key double-lock or thumb lever. Every brand on the handcuffs page is standard-key compatible.

ASP's Sentry line is listed in both styles: Sentry Chain Handcuffs and Sentry Hinge Handcuffs, each described by the maker as double-locking and stainless steel. The Sentry Handcuff Key is the matching standard key. For carriage, ASP's Exo-S Case is cut for Sentry cuffs, and Zero9 lists single and double cases shaped to the Sentry. The Safariland Model 72 pouch (page 16) carries a set of cuffs with a magazine in one body. Other brands on the page: Smith & Wesson, Peerless, Hiatt, Monadnock, UZI.

OC. ASP's Defender line is listed in two sizes, the Palm (Compact) Defender (Black, Blue, Pewter, Red) and the Key (Medium) Defender (Black, Pewter, Red), with the matching inserts as refills. ASP's Defender LE is not on the site today; ask the desk. The Pepper Spray category also carries Sabre and Mace lines.

Ordering for an agency. Cuffs, keys and cases go on the same line as the belt they ride on, so finish and style match the rest of the rig. OC is restricted in some configurations and jurisdictions; agency orders are verified against agency details before quoting or shipping.

The light decides the holster. Spec them together.

Every weapon-light listing on the site names the holster-compatible models, so the light and the duty holster can be ordered on the same quote. A light added later re-runs the whole holster fit matrix (pistol, light, optic); the red-dot transition guide in the Resource Center covers why.

Rechargeable handhelds for patrol. Decide the power source first: rechargeable lights need a charger per officer or per vehicle and cost less over a career. Streamlight's Strion 2020 is listed at 1,200 lumens and 28,000 candela of throw with a tail switch, in 120V AC/12V DC, 12V DC and piggyback-charger versions; the Strion DS HL and DS HPL are the dual-switch models in the same holder footprint. The Stinger 2020 is the full-size rechargeable. Boston Leather lists open-top and loop holders for both. Read candela before lumens (page 10).

Weapon-mounted, as listed. TLR-1 HL (800 lumens, CR123A) and TLR-1s. TLR-7A and TLR-7X (listed multi-fuel), TLR-7XL, and TLR-7 Sub in fits for the Sig P365/P365XL, Glock 43X/48 and 1913 short rails. TLR-8 A, and TLR-8 Sub with red or green laser. TLR-3 (125 lumens) with rail-locating keys. TLR RM 1 and RM 2 for long guns; TLR-9. Nightstick TCM-10 compact and TWM-30 are also listed.

TLR-7X · multi-fuel

Ask the desk

Streamlight's TLR-7 HL-X and TLR-3 X, and SureFire's XC3, are not on the site today. They are current lines through our distributor; the desk quotes them against your holster model. A light-bearing holster is molded for one pistol-and-light pairing: tell the desk the pistol, the light and the optic, and the quote comes back with the holster that fits all three, or a plain statement that one does not exist yet.

New through our distributor. Quote-desk lines until they are on the site.

Four lines our distributor added this season. Where a listing exists we link it; where it does not yet, the quote desk sources it by part number.

Blue Force Gear. Slings and load-carriage. One Vickers padded sling is listed today; the rest of the line is quote-desk.

HKS. Speedloaders and speedloader pouches for revolver-armed details; several fits are listed.

Nexbelt. Ratchet-style belts. Nothing listed yet; quote-desk.

Point Blank Duty Gear. Duty belts and pouches: the Patrol Belt System in 2.25-inch and 1.75-inch, baton and radio pouches, and the rest of the line are listed; quantities and colors go through the quote desk.

Send a part number or a plain description and the desk confirms it is current, quotes it, and tells you the lead time before anything is committed.

A note on helmets

Ops-Core's FAST line is listed in three High Cut models: the FAST Bump (listed material injection-molded nylon; Medium, Large, X-Large), the FAST XR and the FAST SF. A bump helmet is an impact shell. A ballistic helmet is a different product that carries a rating the manufacturer publishes. Our listings name the model and the listed material; any protection level for a given model is on Ops-Core's specification sheet, not on our page. Read that sheet against your requirement before you buy either, and do not assume a bump shell is anything other than what the maker says it is. The desk sends the maker's sheet with the quote.

Dispatch comes out twice a year. Here is how to get the next one.

Dispatch · Desk Edition is the long-form edition of Dispatch, the 911 Network newsletter. It comes out twice a year on the buyer's calendar, not the catalog's: a fall issue in October or November for budget season and grant awards, and a spring issue in March or April ahead of the June 30 fiscal-year close most municipalities run on. Issues are numbered and dated, never seasonal-labelled.

1

Sign up for Dispatch

The email edition goes out between issues with what changed; the long-form edition links from it. The signup is the “Stay in the Loop” form in the site footer or the Dispatch signup on the landing page.

2

Read this issue online, or send it on

The web PDF lives on the Dispatch page with every link live. Forward the link to your quartermaster or purchasing office; the PDF is ungated.

3

Ask for print

When Issue 01 prints, a mailed copy goes to departments that ask. Email support@911network.com with “Dispatch print” in the subject and the department's mailing address.

Tell us what to cover next. The next issue's Gear Desk column is chosen from the questions the desk and Ask the Network see most. Ask yours on any product page, or email the desk.

Need a quote on anything in this issue? Send the list to the Quote Desk; pricing returns the same business day with stock and lead times confirmed. Part numbers help but are not required.
